

8.Experiment: User Management & RBAC in Zoho Creator

Aim :

To configure granular User Management and Role-Based Access Control (RBAC) within a Zoho Creator application to secure modules, restrict data visibility, and assign designated operational roles.

Workflow:

Role-Based Access Control restricts system access based on the organizational role of a user. In this lab, we configure an enterprise application in Zoho Creator featuring three distinct user tiers:

Role Name	Assigned Permissions	Data Access Scope
Administrator	Full Create, Read, Update, Delete (CRUD)	All records across organization
Manager	Read, Update, Approve Records	Assigned Region / Department records
Standard Employee	Create & Read own submissions	Only self-created records

Procedure:

1. **Access Developer Mode:** Log into Zoho Creator, open your target application, and navigate to the *Settings* tab in the left-hand builder menu.
2. **Configure Users & Roles:** Click on **Users & Permissions** under the Users section. Select the *Roles* sub-tab and create custom roles (e.g., Manager, Employee) alongside the default Administrator role. Establish hierarchy reporting lines if required.
3. **Define Profiles & Permissions:** Navigate to **Profiles** to fine-tune module-level permissions (Form creation, Report viewing, Edit/Delete rights).

Screenshots:

The top screenshot shows the 'Users' settings page for a 'Bank Loan Application' in Zoho Creator. The page title is 'Users' with a subtitle 'Add and manage users' permissions and roles in the application. Define the visibility of records for each users. The page has tabs for 'Permissions', 'Roles', and 'Data Sharing'. The 'Roles' tab is active, showing a list of roles: CEO, Bank Manager, and Loan Officer. There are buttons for 'Expand All', 'Collapse All', 'Manage Role Hierarchy', and 'Add Role'. The left sidebar shows the application structure with categories like PERMISSIONS, PERSONALIZATION, and DEVELOPER TOOLS.

The bottom screenshot shows the 'Bank Loan Application' overview page. The page has a header with the application name 'Bank Loan Application' and a URL. Below the header, there are three main sections: 'Permissions' (containing User Permissions and Portal User Permissions), 'Personalization' (containing Localization, Contextual Messages, and Record Templates), and 'Developer Tools' (containing Schema Builder, Application IDE, Widgets, and Variables). The left sidebar shows the application structure with categories like PERMISSIONS, PERSONALIZATION, and DEVELOPER TOOLS.

The image displays two screenshots from the Zoho Creator application builder interface.

The top screenshot shows the 'Workflow' configuration page for a 'Bank Loan Application'. The left sidebar lists 'Forms with workflows' and 'Forms without workflows'. The main table lists various workflows with their details, status, and creation dates.

Workflow Name	Details	Status	Created On
Created > Field rules			
Daily_Pending_Document_Reminder_Schedule	0 Actions	Enabled	06-Oct-2026
Created > Load of the form			
On_Application_Submit_Workflow	1 Action	Enabled	06-Oct-2026
On_Application_Submit_Workflow	0 Actions	Enabled	06-Oct-2026
Created > Successful form submission			
Email	1 Action	Enabled	06-Oct-2026
On_Application_Submit_Workflow	1 Action	Enabled	06-Oct-2026
Created or Edited > Load of the form			
permission	0 Actions	Enabled	09-Oct-2026

The bottom screenshot shows the 'Deluge Script' editor for the 'permission' workflow. The script is a conditional statement that checks the 'Input_Actual_Amount_Field' and sets the 'Input_Actual_Status_Field' accordingly.

```
1 if (Input_Actual_Amount_Field >= 500000)
2 {
3   Input_Actual_Status_Field = "Manager Review";
4 }
5 else
6 {
7   Input_Actual_Status_Field = "Pending";
8 }
```

Result:

User management and RBAC rules were successfully configured and tested in Zoho Creator, ensuring robust application security, data isolation, and structured multi-user workflow execution.
